Natural Resource Partners Lp

NRP · NYSE · Industry: Bituminous Coal & Lignite Surface Mining

Based on its annual report (10-K) filed February 27, 2026 and quarterly report (10-Q) filed November 4, 2026, from SEC EDGAR.

How to read it: key finance terms are **highlighted** and explained under "Key terms" at the back, figures are in **bold**, and each [number] matches the source list. Every figure is worked out in code from the company's own SEC filings: it describes the business, not whether to buy, sell or hold its shares. Share price and latest news: www.candorweb.site/stock/NRP.

KEY TAKEAWAYS FROM THE FIGURES

- Its business brought in **$165.9 million** of cash, leaving **$165.9 million** after paying for buildings and equipment. [1]
- It held more cash than its **long-term debt** (net cash of **$51.7 million**). [1]

KEY FIGURES

Profitability

EBITDA	**$159.3 million**

Cash flow

Operating cash flow	**$165.9 million**
Free cash flow	**$165.9 million**

Debt and safety

Net cash (more cash than debt)	**$51.7 million**
Current ratio	**2.74**

Latest financial year; balance-sheet figures on the latest report date. In US dollars.

WHAT THE FIGURES SHOW IN ITS FAVOUR

- After paying for buildings and equipment, the business produced **$165.9 million** of **free cash flow**.
- It held **$51.7 million** more cash than **long-term debt** on September 30, 2026 (net cash).
- It had **$2.74** of current assets for every **$1** of bills due within a year on September 30, 2026.

WHAT TO KEEP AN EYE ON

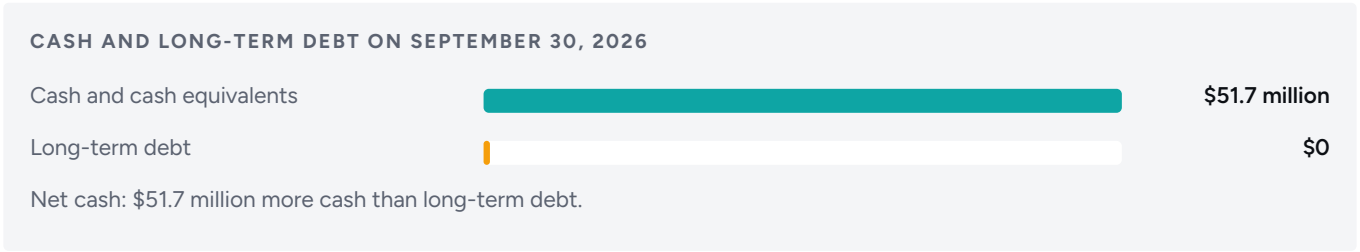

1 Growth and profit

Whether it sells more each year, and how much of each sale it keeps. From the income statement.

- **Net income**, the profit left after all costs and taxes, fell **25.7%** to **$136.4 million** in the year ended December 31, 2025. [1]

2 Financial health

Whether it can pay its bills and how much it relies on borrowed money: its cushion for bad times. From the balance sheet.

- On September 30, 2026, the company had **$51.7 million** in **cash and cash equivalents**, money it can use quickly. [2]
- On September 30, 2026, it owed **$0** in **long-term debt** due after the next 12 months. [2]
- On that date it held more in cash than it owed in **long-term debt**. [2]
- On September 30, 2026, the company had **$80.9 million** in cash and other assets it expects to use within a year, against **$29.5 million** of bills due within a year. That is about **$2.74** for every **$1** it owes soon, more than enough to cover them. This is its **current ratio**. [2]
- It owned **$763.9 million** in assets and owed **$94.3 million** in **total liabilities**, so it owned about **$8.10** for every **$1** it owed. [2]

3 Cash

Profit follows accounting rules; cash is what actually lands in the bank. Free cash flow is what's left after investing in the business. From the cash flow statement.

- Its day-to-day business brought in **$165.9 million** of cash in the year ended December 31, 2025. This is called **cash from operations** (**operating cash flow**). [1]
- Its business brought in **$165.9 million** of cash in the year ended December 31, 2025 and spent **$0** on buildings and equipment (**capital expenditure**), leaving **$165.9 million** of **free cash flow**: money it could use for dividends, buybacks, paying down debt or growing. [1]
- **Free cash flow** was larger than its **net income** (**$136.4 million**) that year, meaning the cash the business actually brought in more than matched its accounting profit. [1]

4 How it's run

How its leaders use the company's money, how much profit they make with shareholders' money, and official warning signs about its accounts.

Accounts check

- No **auditor** changes or **restatement** notices were filed since November 11, 2023. These are the two official warning signs a company must announce.

5 How the numbers link

The sums that connect one figure to the next, worked out with the company's own figures, so you can see exactly where each number comes from.

Net income and operating cash flow measure the same year in two ways

Net income $136.4 million vs Operating cash flow $165.9 million

Profit counts a sale when it's made and spreads the cost of equipment over many years; cash counts money only when it actually moves. This year the business brought in **$29.5 million** more cash than its **net income**, for example because yearly wear-and-tear charges on equipment lower profit but aren't paid in cash.

Figures for the year ended December 31, 2025.

Free cash flow = operating cash flow − capital expenditure

Operating cash flow $165.9 million − Capital expenditure $0 = Free cash flow $165.9 million

The business brought in **$165.9 million** of cash and spent **$0** of it on long-lasting things like buildings and equipment, leaving **$165.9 million** of **free cash flow**.

Figures for the year ended December 31, 2025.

Net debt = long-term debt − cash

Long-term debt $0 − Cash $51.7 million = Net debt −$51.7 million (net cash)

It held **$51.7 million** in cash against **$0** of **long-term debt**: **$51.7 million** more cash than long-term borrowing (net cash).

Figures for the on September 30, 2026.

Current ratio = current assets (cash is one part) ÷ bills due within a year

Current assets $80.9 million ÷ Bills due within a year $29.5 million = Current ratio 2.74

Its current assets (cash of **$51.7 million**, money customers owe it, stock and other things it expects to turn into cash within a year) came to **$80.9 million**, against **$29.5 million** of bills due within a year: **$2.74** for every **$1** due.

Figures for the on September 30, 2026.

6 What changed in a year

Each figure next to the same figure a year earlier. Quarters are compared with the same quarter a year before, because many businesses are busier in some seasons.

FIGURE	LATEST	A YEAR EARLIER	CHANGE
Net income (profit) Year ended December 31, 2025, vs the year before	$136.4 million	$183.6 million	Down 25.7%
Net income (profit) Quarter ended September 30, 2026, vs the same quarter a year earlier	$26.5 million	$30.9 million	Down 14.1%
Cash from operations Year ended December 31, 2025, vs the year before	$165.9 million	$248.5 million	Down 33.3%
Cash On September 30, 2026, vs a year earlier	$51.7 million	$31 million	Up 66.6%
Long-term debt On September 30, 2026, vs a year earlier	$0	$55.1 million	Down 100%

7 Recent official announcements

Major events the company reported to the SEC in the last four months (form 8-K).

- November 4, 2026: Shared financial results. [3]
- August 5, 2026: Shared financial results. [4]

A Every figure, and how it's worked out

Worked out in code from the figures the company tagged in its SEC reports. candor only combines figures covering exactly the same period, and leaves a figure out rather than guess.

Size and growth

Revenue
Not reported
Not in its latest reports: the last figure it filed is more than a year old.
How it's worked out: Total sales for the financial year, as reported.

Revenue growth
Not reported
Not in its latest reports: the last figure it filed is more than a year old.
How it's worked out: (This year's sales − last year's sales) ÷ last year's sales.

Profitability

Gross margin
Not reported
Not in its latest reports: the last figure it filed is more than a year old.
How it's worked out: Gross profit ÷ sales, for the same year.

Operating margin
Not reported
Not in its latest reports: the last figure it filed is more than a year old.
How it's worked out: Operating income ÷ sales, for the same year.

Net profit margin **Not reported**	Not in its latest reports: the last figure it filed is more than a year old. How it's worked out: Net income ÷ sales, for the same year.
EBITDA **$159.3 million**	The main business earned $159.3 million before interest, tax and wear-and-tear charges, in the year to December 31, 2025. [1] How it's worked out: Operating income + depreciation and amortisation, for the same year. Year to December 31, 2025.

Cash flow

Operating cash flow **$165.9 million**	Its day-to-day business brought in $165.9 million of cash. [1] How it's worked out: Net cash from operating activities, as reported. Year to December 31, 2025.
Free cash flow **$165.9 million**	After paying for buildings and equipment, $165.9 million of cash was left over. [1] How it's worked out: Operating cash flow − capital expenditure, for the same year. Year to December 31, 2025.

Debt and safety

Net cash (more cash than debt) **$51.7 million**	It held $51.7 million more cash than its long-term borrowing on September 30, 2026 (net cash). [2] How it's worked out: Long-term debt − cash and cash equivalents, on the same date. On September 30, 2026.
Debt-to-equity ratio **Not reported**	Not reported in its SEC filings. How it's worked out: Long-term debt ÷ shareholders' equity, on the same date.
Current ratio **2.74**	For every $1 of bills due within a year, it had about $2.74 it expects to turn into cash in that time. [2] How it's worked out: Current assets ÷ current liabilities, on the same date. On September 30, 2026.

Returns to owners

Return on equity (ROE) **Not reported**	Not reported in its SEC filings. How it's worked out: Net income ÷ average shareholders' equity at the start and end of the year.
Earnings per share (EPS) **Not reported**	Not reported in its SEC filings. How it's worked out: Diluted earnings per share, as reported.

B Key terms

Every highlighted term in this report, in plain English.

8-K (announcement): A filing companies make with the SEC within days of a major event, such as results, a new chief executive or a big acquisition.

Assets: Everything the company owns that has value: cash, buildings, equipment, money owed to it, and more.

Auditor: An independent accounting firm that checks a company's financial statements every year and says whether they are fairly presented.

Capital spending: Cash spent on long-lasting things the company will use for years, like factories, stores, data centres and equipment. Often shortened to capex.

Cash and cash equivalents: Money in the bank plus very safe investments that can be turned into cash almost immediately.

Cash from operations: The cash that came in from customers minus the cash paid out to suppliers, staff, landlords, lenders (interest) and the tax office during the period. It differs from profit because of timing, such as customers paying later, and because some costs in profit, like wear and tear on equipment, aren't paid in cash.

Current ratio: Current assets (cash, money customers owe it, stock and anything else it expects to turn into cash within a year) divided by current liabilities (bills it must pay within a year). 1.5 means $1.50 coming in for every $1 due.

Debt-to-equity ratio: Long-term borrowing divided by shareholders' equity (what the accounts say belongs to the owners). 0.5 means $0.50 borrowed for every $1 of owners' money; higher means it relies more on borrowed money.

Earnings per share (EPS): Net income divided by the average number of shares during the period. "Diluted" EPS also counts shares that could still be created, for example from staff stock awards, so it's usually slightly lower.

EBITDA: Earnings before interest, tax, depreciation and amortisation: profit from the main business before paying interest and tax, and before the yearly wear-and-tear charge on buildings and equipment.

Free cash flow: Operating cash flow minus capital expenditure: the cash left after the business pays for the buildings and equipment it needs. It's what the company can use to pay dividends, buy back shares, repay debt or save.

Gross margin: Gross profit (sales minus the direct cost of making or buying what was sold) as a share of sales. A 40% gross margin means $40 of every $100 of sales is left to pay for everything else.

Long-term debt: Money the company has borrowed and must pay back over more than a year, such as bonds and bank loans.

Net debt: Long-term borrowing minus the cash the company holds. A negative figure means it holds more cash than it owes long-term (net cash).

Net income: The profit left over a period (such as a year or a quarter) after paying every cost, including wages, interest and taxes. Often called the bottom line.

Operating margin: Operating income as a share of sales: of each $100 of sales, what's left after paying for what was sold and for running the business, before interest and tax.

Profit margin: Net income as a share of sales: what's left after every cost, including interest and tax. A 10% net profit margin means $10 of final profit for every $100 of sales.

Restatement notice: A filing where a company says financial statements it published earlier contained errors and should no longer be relied on.

Return on equity (ROE): Net income for a year divided by the average shareholders' equity over that year. A 20% ROE means $20 of profit for every $100 of owners' money in the business.

Revenue: All the money a company takes in from selling its products and services, before paying any costs. Also called sales.

Revenue growth: How much sales rose or fell compared with the year before, as a percentage.

Total liabilities: Everything the company owes: loans, bonds, bills to suppliers, taxes due, and other obligations.
